

Q & A

Why should I fit a Blueproof™ device?

The **Blueproof™** device is being approved by the world's leading certifying authorities: Lloyds and DNV and will meet all European, Russian and American standards. It has been designed to give you and your loved ones that extra time needed to improve your chances when a fire occurs. It requires no maintenance and will provide constant protection.

It will fit into all homes with or without running water, from the tanks on the roof and even on cans carried from the river.

The scope of **Blueproof™** is endless: areas where fire-fighting vehicles

cannot reach easily: such as congested and overcrowded slums, remote areas in Siberia to the engine compartment of your car. It's made from high-tech plastic so it will not affect your water supply. It is relatively cheap to install and gives a level of protection that has never previously been available.

Blueproof™ has been patented throughout the world.

Will it fit my radiator?

Currently Blueproof™ fits standard size radiators but other sizes will be produced in the future. In the meantime, it's possible to get adaptors from plumbers' merchants.

Can I fit them?

Yes. Isolate the radiator, remove the existing vent (or blanking) plug and replace with a Blueproof™ combined vent plug. Fit, open the valves and it's working.

What is Blueproof™ ?

Blueproof™ is a moulded high-tech plastic device that doubles as a vent plug. It has an array of heat detecting areas which, if a fire breaks out, self-target the heat source, open and propel the fluid in your radiator directly at the fire.

Will Blueproof™ work with my central heating system?

Yes. Blueproof™ works with all central heating systems that contain fluid or vapourised fluid, as the heating medium.

Will Blueproof™ fight my fire?

Yes. Blueproof™ will aid in the fighting of a major fire, reduce the smoke that kills and give you valuable time to escape.

Is it a fire-fighting device?

It has been shown to fight fires but NO it is a level of protection.

Can I enter a room after a fire?

NO, you wait for or call the fire brigade and isolate any power if it is safe to do so.

BLURAD LTD

Born out of anger for the six children who died in the 2012 Derby house fire.

BLUERAD LTD has been formed with the participation of expert technical safety and design engineers drawn from all corners of the world and with the advice and support of the fire departments.

BLUERAD LTD's aim is to bring to market a range of innovative fire protection devices that will add to the safety of your home, vehicle or working environment with the aim of protecting the lives of you, your children and loved ones all around the world.

Nothing like the **Blueproof™** product has ever been available.

presents
BLUEPROOF™

Blueproof™ is a revolutionary active fire safety barrier device that gives your home a level of protection against fire that has never before been available.

It provides a means of releasing the fluid from your central heating radiators when fire is detected. The device has no moving parts and provides added protection to you and your family 24/7/365.

Blueproof™ will be available in all good D.I.Y. stores in 2014 or pre-order from www.bluerad.co.uk
